

**Endometriosis :**  
**Innovation in the reduction of the main disabling symptom.**  
**For 91.3% of women, their quality of life is regained.**

A clinical study highlights, for the first time,  
66.1% reduction in pain due to endometriosis  
thanks to an innovative solution

-----

**Paris, France - March 5, 2021** - Laboratoires Pronutri present a specific complex showing a 66.1% reduction in pain due to endometriosis. A **clinical study published in the journal Minerva Ginecologica in October 2020 and in the journal Genesis in June/July 2020** shows a reduction in pain in women with endometriosis of AFSr\* stages II, III and IV in a maximum of 4 months.

As endometriosis is an ever-increasing pathology, generally recurrent and often accompanied by intense chronic pain, **millions of women worldwide** will be able to access a solution that can **improve their quality of life.**

**A natural solution formulated and developed in France**

Laboratoires Pronutri, whose headquarters and production center are based in France, have developed a **specific and innovative formulation of trace-metals called Nutri Endo®**, a **natural solution that reduces pain by 66.1%** in women suffering from endometriosis. This level of reduction is a particularly high index considering that pain reduction is defined as significant as early as 33% according to a study published in 2003 (cf.1).

Nutri Endo is a specific complex of trace-metals assembled in sequences. It is **natural and free of undesirable effects**. Its recommended duration of use is 2 months for early stages (I and II) or for prevention and 4 months or more for stages III and IV and long established endometriosis.

Nutri Endo can be taken during Medically Assisted Procreation (MAP) processes.

**Endometriosis, a recurrent pathology, in constant increase**

According to the Ministry of Solidarity and Health, endometriosis affects approximately 10% of women worldwide and more than 2 million in France.

Cases of endometriosis are constantly on the rise and we are seeing a broadening of age groups with more and more young girls affected from the time of their first menstrual period.

Endometriosis is a generally recurrent pathology, caused by the abnormal presence of endometrial cells outside the uterine cavity.

Pain is the main disabling symptom. Chronic pain prevents a woman from leading a normal, professional, social and intimate life, and can even lead to sterility. Follow-up in a pain center is sometimes necessary. In case of surgery, the average post-operative recurrence rate is about 20% within 5 years.

### **An international multicenter clinical study**

Nutri Endo has been submitted to a clinical study approved by regulatory authorities and ethics committees. This study was conducted in several international centers on a randomized, double-blind, placebo-controlled basis in premenopausal women with a diagnosis of ASFr stages II, III and IV endometriosis.

### **Nutri Endo for women of various ages**

The Nutri Endo innovation is aimed at women with various endometriotic profiles, from the preventive stage for the youngest (first menstruation) to the oldest, as well as women with a desire to procreate.

Whether the endometriosis is recent or has been present in women for many years, the specific Nutri Endo formula provides a specific effective response and optimal compliance.

## About Laboratoires Pronutri

Laboratoires Pronutri are located in Carros in France and specialize in specific **informational research induced in functional disturbances** which, when they are restored, help **restore balance and vitality**. Laboratoires Pronutri formulate, manufacture and distribute nutritional supplements using advanced technology. They have multiple partnerships in advanced research with, amongst others, **the ANR, CNRS and INSERM**. Current discoveries, particularly in the field of endometriosis, represent the culmination of nearly 40 years of research and expertise in micro-nutrition and more specifically in the **controlled molecular information** and applications of Nutripuncture®.

**The Nutri Endo product** is distributed under the brand name **NUTRILAB**, in a partnership with Laboratoires Pronutri : [www.laboratoiresnutrilab.com](http://www.laboratoiresnutrilab.com)
